## Exercise 2

## Introduction

## Price

Table 1: Coffee prices

price	
7	
5	
3	

# Price breakdown Cappuccino

Contrasting ideas about what is happening to public space in North America can be observed. Zukin cites the example of a revitalisation and design-led strategy in Bryant Park, New York City, as 'domestication by cappuccino' (Atkinson 2003). However, this is totally irrelevant. Let's look at a price breakdown of a cappuccino:

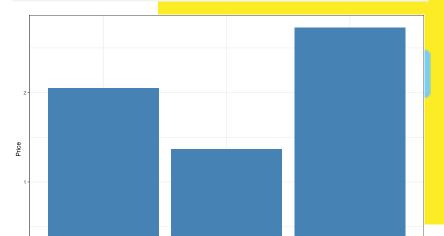

$$Coffee_{price} = 0.68 + 1.37(Espresso_{shots})$$

$$Coffee_{price} = 0.68 + 1.37(1)$$

$$= 2.05$$

#### R-code

```
# Create example code for some coffee calculations
coffee <- c("Espresso", "Cappuccino", "Flat White")
price <- c(1.37, 2.05, 2.73)
df <- data.frame(coffee, price)
df</pre>
```
